

## Coal-Fired Power Plant Demolition

Envirocon was selected to plan and execute the decommissioning and demolition of a coal-fired power plant in Canadys, SC based on our exemplary safety record, strong financials, and depth of experience. The Canadys Station facility consisted of three coal-fired steam electric generating units with a 450MW capacity.

Envirocon participated in a complex planning phase and worked closely with our client to obtain a comprehensive understanding of project objectives. Relying on our extensive experience handling hazardous materials on remediation projects, Envirocon completed the abatement of ACM and other hazardous materials. Equipment from Envirocon's vast fleet was used, and included large excavators with multiple attachments: shears, hammers, grapple and magnet, and pulverizers.

Field work was initiated by performing pre-demolition activities including removal of universal wastes. Hazmat and engineering surveys were conducted to identify potential hazards and determine the safety of working around buildings and equipment. Next, support buildings (two-story, 75,000 sf) were demolished simultaneously with the preparation for abatement of the boilers and other plant structures.

## Plan And Use Safety Everyday (PAUSE)

Envirocon recently held a company-wide PAUSE (Plan and Use Safety Everyday) for safety. Employees from Envirocon’s 14 offices and multiple North American project site employees, clients, and subcontractors joined a company-wide live presentation focused on a “Pause for Safety” which conveyed to all employees Envirocon’s continued commitment to safe performance, setting expectations for the balance of work in 2015, and challenging each other to improve as safety mentors, coaches, and role models, both on and off project sites.

Envirocon’s team of presenters was led by Jack Gilbraith, President/CEO, as well as Kris Kok, Vice President/COO; Paul Halliday, Canadian President; and Frank Sullivan, Director of Health & Safety. Envirocon’s goal for “Incident-Free Performance” on every project was at the center of the message as well as the tools we use every day as a company to achieve this goal. The tools discussed included “Stop Work Authority,” planning for all phases of work, and the use of established processes. Following the presentation, employees completed a group activity promoting additional safety topic discussions and presented creative feedback to management regarding Health and Safety processes and procedures, mitigating hazards, and employee safety engagement.
